EMERGENCY OUTAGE ANNOUNCED

Emergency Repairs To Two Baseload Plants Are Underway with a Third Baseload on Limited Production - GPA working on repairs to stabilize power system

(Fadian, Guam) – In addition to the regularly scheduled rotating outages slated to begin at 4 pm, GPA will have to implement emergency outages between 12 noon and 3 pm today. Two (2) of the island's four (4) baseload power plants, Cabras 2 and MEC 9 are offline for emergency repairs.

- Baseload unit, MEC 9 was taken offline this morning at about 8:55 am for leak repairs. We expect the unit to return to service sometime this evening.
- Cabras 2 has been offline since August 24, 2023 due to boiler tube leak with the unit expected to return to service on Friday, September 1, 2023.
- Additionally, baseload unit, MEC 8 is on limited production due to high liner temperature on cylinder no. 3.

With two base load generators down and a third on limited production, GPA will need to implement rotating outages lasting up to 1-hour in order to maintain grid stability when customer energy demand exceeds total energy capacity. Power will be reconnected to all affected customers at the top of each hour.

A supplemental schedule for the emergency outage between 12 noon and 4 pm will be issued shortly and posted on GPA's website and social media pages.

We thank you for your continued patience and urge the community to follow our social media pages and website for the latest outage information.
