Power System Status Update

Cabras #2 and Yigo CT Online

(Fadian, Guam) – The Guam Power Authority (GPA) is providing its customers with the following updates to the generation and power system as of today.

- Baseload unit Cabras#2 was brought online this morning and is almost at full production capacity with its contribution of 31 MW to the grid as of this afternoon. Plant personnel continue to monitor the unit and increase load as needed.
- Yigo Combustion Turbine (CT) returned to service yesterday and cleared for 20 MW at 9:30 pm.

Although GPA does not anticipate any rotating outages tonight, we continue to encourage customers to implement conservation measures such as turning off water heaters and limiting full usage of air conditioning at their homes and offices. Enacting conservation plans reduces the demand for energy and can mitigate the need for outages.

We thank you for your continued patience and urge the community to follow our social media pages for the latest information.
