POTENTIAL 1 to 2-HOUR ROTATING OUTAGES

MEC 9 Limited Capacity & Cabras 2 Boiler Tube Leak

(Fadian, Guam) – The Guam Power Authority advises customers of possible 1 to 2-hour rotating outages 3:00 p.m. through 12 a.m. for July 30 – Aug 6, 2023 due to limited generation capacity.

Yesterday, in addition to the Dededo CT 1 and MEC 9 units that were offline due to emergency and planned maintenance, Cabras #2 tripped offline at 8:12PM due to a boiler tube leak. Dededo CT 1 returned to service at approximately 9:00PM after completing emergency repairs on the unit. MEC 9 also returned to service at 2:30AM initiating the required ramp up and monitoring process after cylinder liner replacement and remains limited until the process is completed tomorrow. Cabras #2 is being cooled down before assessment for tube leak location and repair. Depending on the leak location and required repairs, the unit may be down for 3-5 days.

To maintain grid stability when customer energy demand exceeds total energy capacity, GPA will, as a last resort, implement **rotating outages lasting up to 2-hours.** Power will be reconnected to all affected customers at the top of each hour.

The attached schedule is issued as a precautionary notice to allow customers to plan accordingly should outages be necessary while these critical generation units are under repair. “We ask for your patience and kindly request that all customers continue to conserve power, especially during the peak demand hours from 6 p.m. to 10 p.m.,” noted John M. Benavente, P.E, GPA General Manager. Conservation efforts such as turning off electric water heaters during peak demand hours can significantly assist in reducing peak demand and load shedding requirements.

This notice is provided but does not mean a power interruption will occur. This weekly outage schedule will be posted on GPA’s website and social media pages. We thank you for your understanding and continued patience.
