PLEASE NOTE:

1. As circuits are assessed and repaired, some portions of the circuit may be energized while others cannot due to pending repairs or additional assessments.
2. The islandwide power system (IWPS) is dynamic, especially during post-storm restoration. As more of the IWPS comes online, it is not uncommon for re-energized circuits (or portions of) to trip offline. The crews will continue to troubleshoot these issues as quickly and safely as possible.
3. The information provided here is meant to provide a high-level view of post-storm power restoration. This process is systematic to ensure safety of personnel, customers, and the IWPS. For more info, see https://admin.guampowerauthority.com/uploads/GPWA_JOINT_UPDATE_POST_TYPHOON_RESTORATION_OF_UTILITY_SYSTEM_20230527_Final_doc_dd3ead1c6e.pdf
