POTENTIAL 1-HOUR ROTATING OUTAGES

Repairs to Combustion Turbine Units Continue

(Fadian, Guam) – The Guam Power Authority advises customers of possible 1-hour rotating outages throughout the next 7 days between 5:00 p.m. through 11 p.m. due to limited generation capacity.

Key combustion turbine units, Dededo CT1 and Yigo CT, remain offline. These key generator units assist with power capacity especially during peak energy demand. Dededo CT1 is expected to return online after completion of repairs by next week. The typhoon damage to Yigo CT requires more extensive repair, estimated at 3-4 months. Baseload units, Cabras 1 & 2 and Piti 8 & 9, are in service and produce the majority of the energy demand. The Mangilao and Dandan solar PV facilities contribute to the total energy production during daylight hours, prior to the evening peak demand.

To maintain grid stability when customer energy demand exceeds total energy capacity, GPA will, as a last resort, implement **rotating outages lasting up to 1-hour.** Power will be reconnected to all affected customers at the top of each hour.

The attached schedule is issued as a precautionary notice to allow customers to plan accordingly should outages be necessary while these critical generation units are under repair. "We ask for your patience and kindly request that all customers continue to conserve power, especially during the peak demand hours from 6 p.m. to 10 p.m.," noted John M. Benavente, P.E, GPA General Manager.

This notice is provided but does not mean a power interruption will occur. This weekly outage schedule will be posted on GPA's website and social media pages. We thank you for your understanding and continued patience.
